

## Biography

Prof. Dr.-Ing. habil. Joško Ožbolt

Joško Ožbolt received his PhD from the University of Zagreb in 1982. In 1995 he finished his postdoctoral thesis, "Size Effect and Ductility of Concrete and Reinforced Concrete Structures" at the University of Stuttgart, Germany. From 1978 till 1989 he was working at the University of Zagreb, Faculty of Civil Engineering. Since 1989 he is at the Institute of Construction Materials, University of Stuttgart, Germany. From 2005 he is also teaching at the University of Rijeka, Faculty of Civil Engineering. The main field of his interest includes computational mechanics, fracture mechanics, static and dynamic fracture of materials and structures and durability mechanics (e.g. behavior and modeling of: concrete like materials at elevated temperature, transport processes in concrete, corrosion of steel reinforcement in concrete, etc.). In these fields he is the author or co-author of a number of publications in relevant journals and books.
